

COMPLIANCE

This is the adherence to *mandatory* governance requirements which could be documentation, system settings and policy requirements.

Compliance is typically measured by security controls.

COMPLIANCE

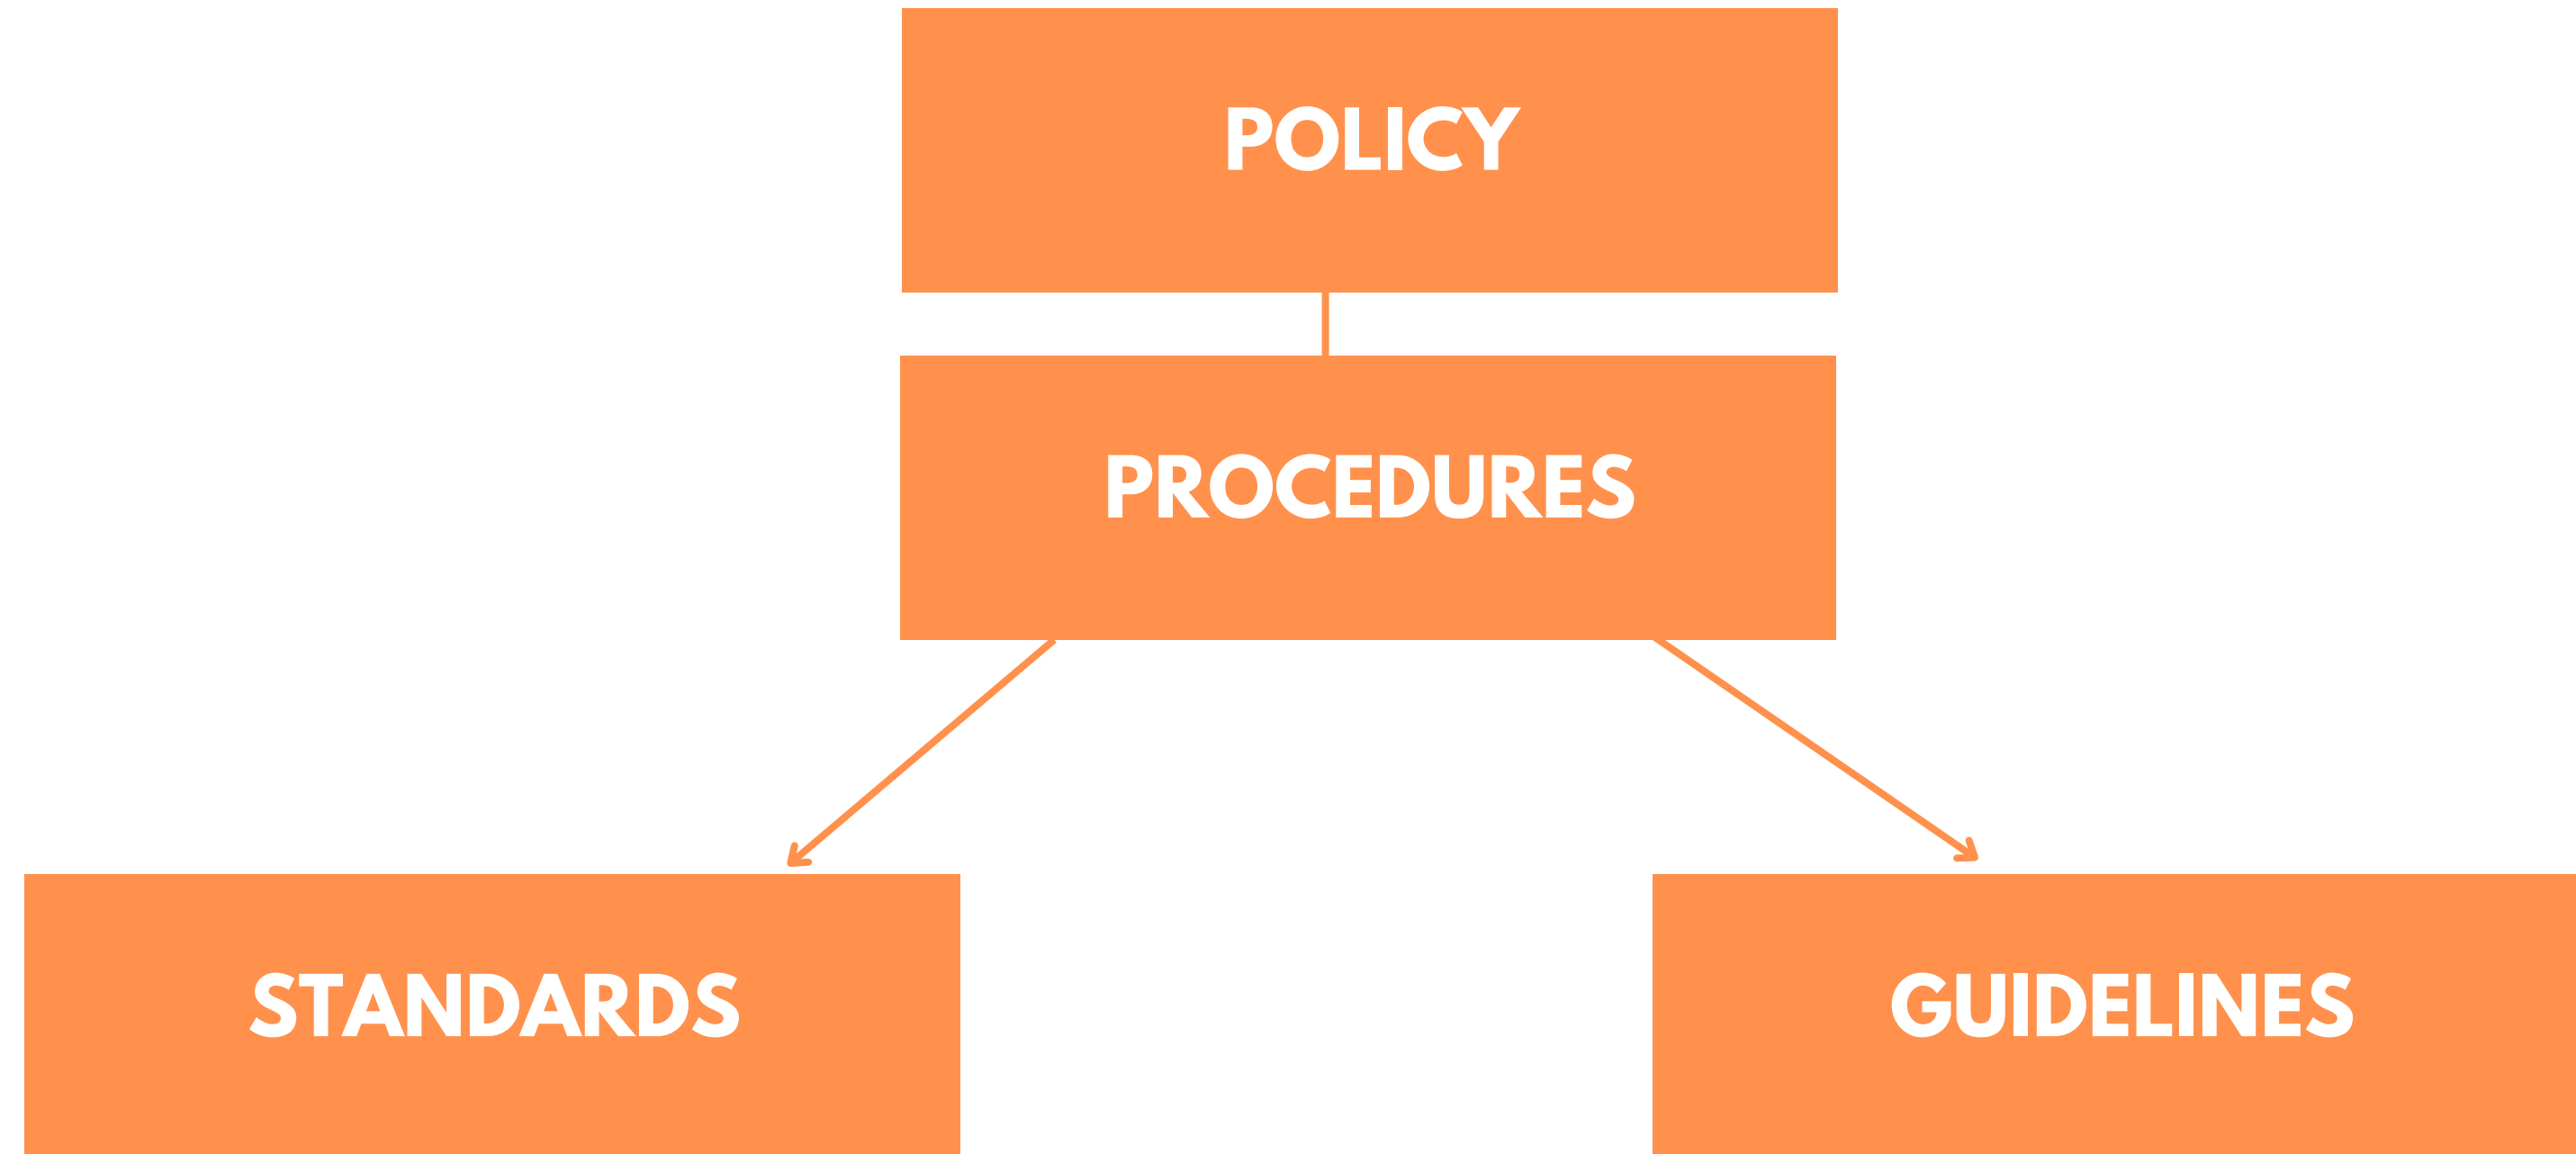

GOVERNANCE

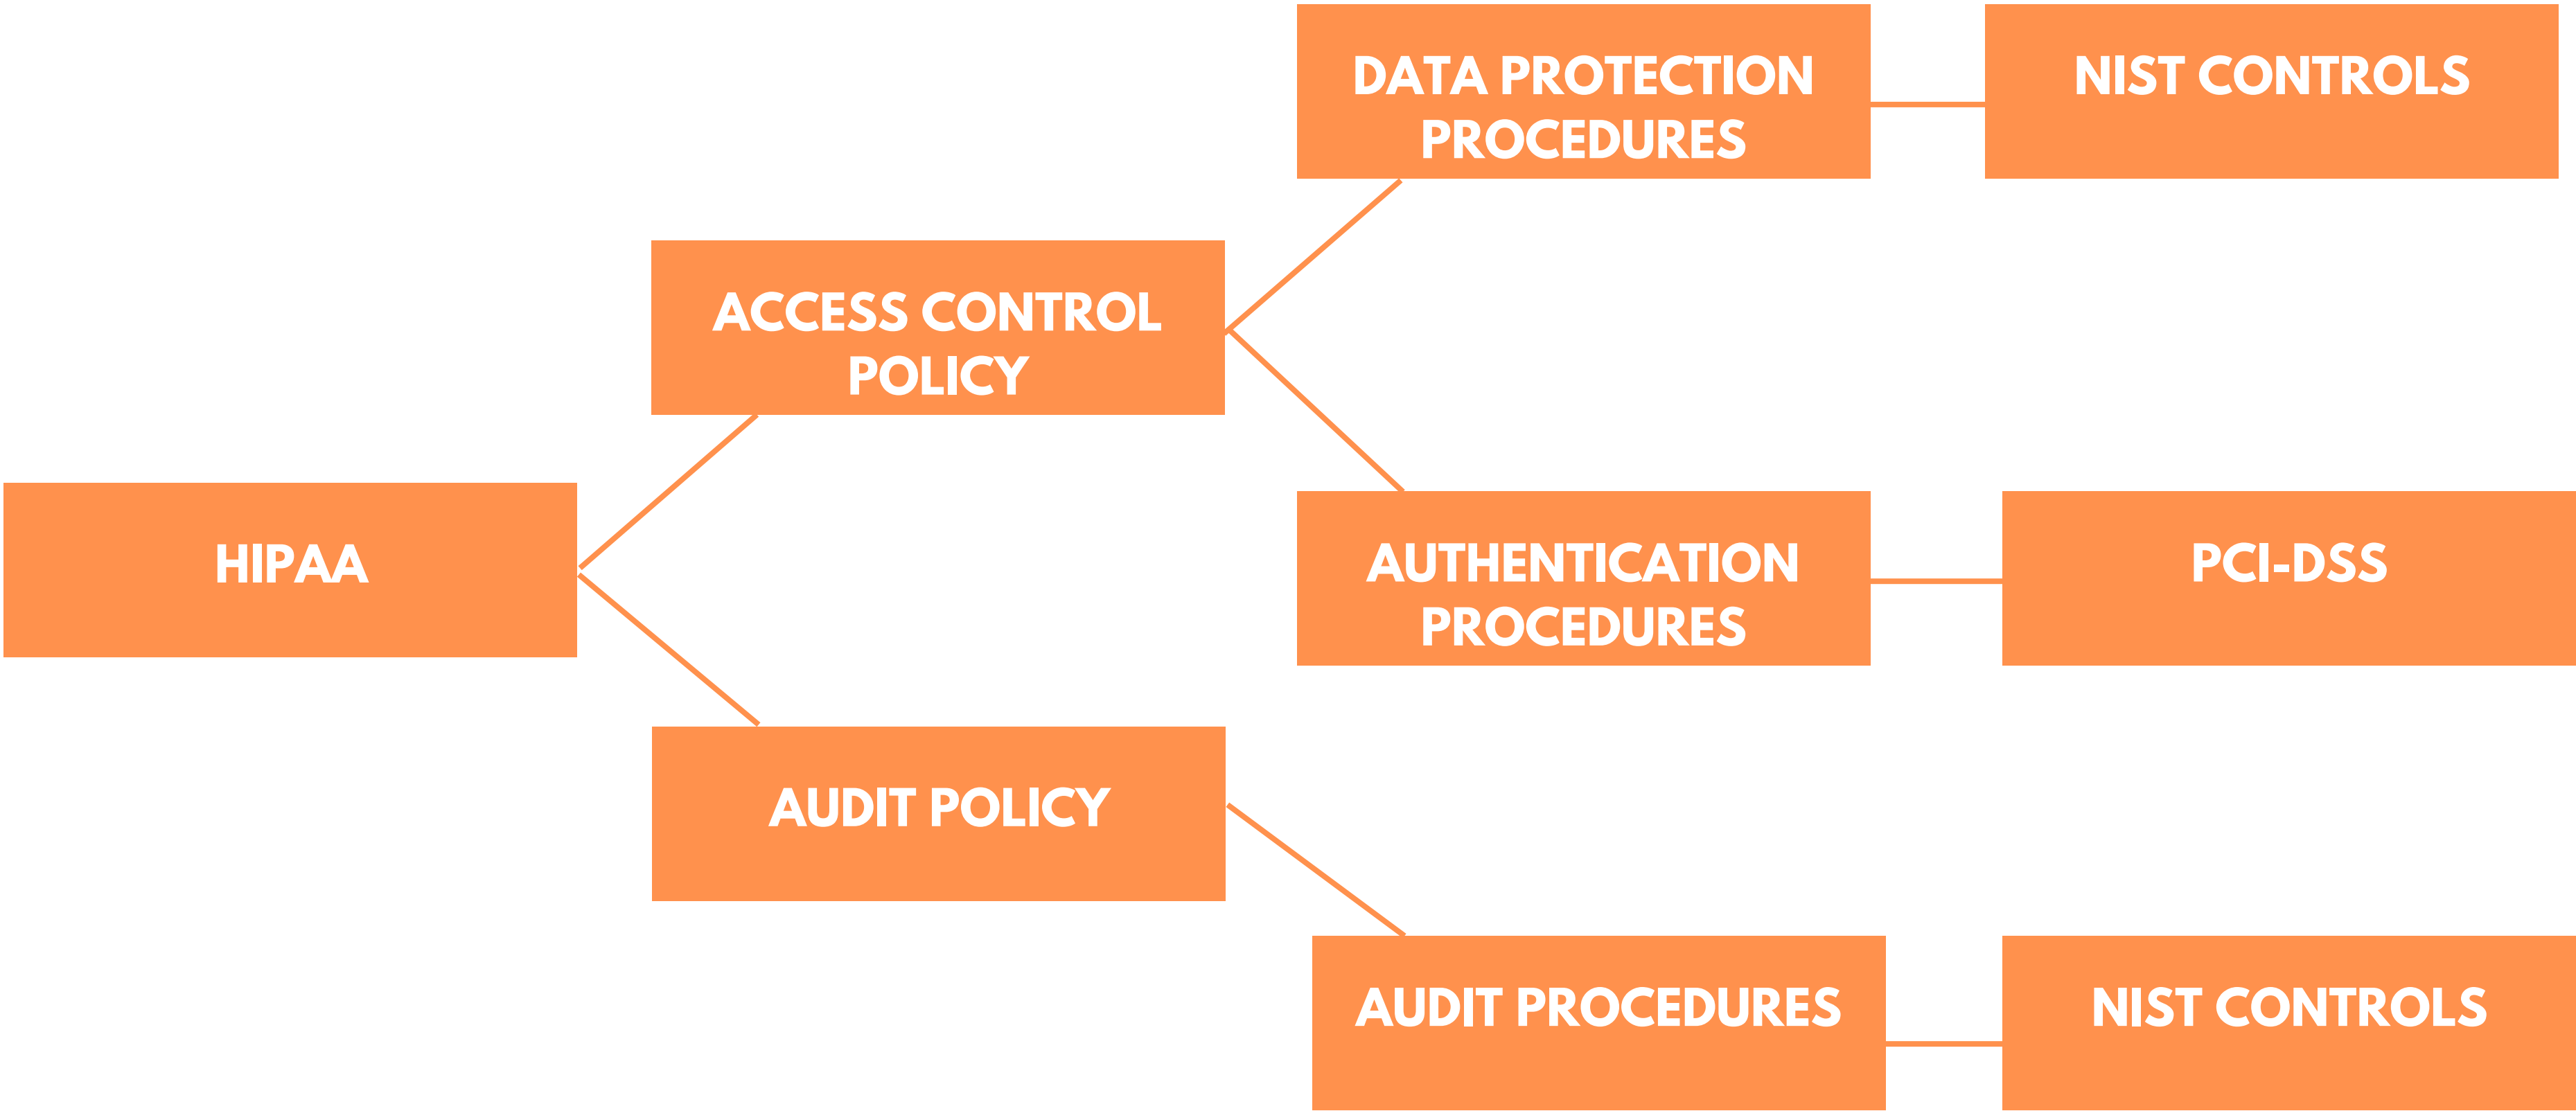

- External (Laws, Data protection regulations)
- Internal (Access control policy, Data classification policy)

POLICY

FLOW OF GOVERNANCE

Compliance does not guarantee immunity
to cyber attacks.

Compliance is a standardized approach and does not account for organization or system uniqueness and can also be slow to change.
